

“The future of facial red vein treatment”

Before

After

Before

After

face-the revolution...

Beauty clinics, spas and salons have for many years been searching for the most effective method to treat facial thread veins and the problem of Rosacea. Medical practitioners in recent years have had the benefit of being able to use a treatment known as Veinwave™ which utilises the principle of thermo-coagulation to tremendous effect. It has been acclaimed as being the safest and most reliable treatment for fine thread veins. Now, at last, that same technology is available to the Beauty Industry, in the form of V-Beauty™.

The treatment is based on the action of heat energy created by a very high frequency current, which produces a thermal lesion and causes the immediate disappearance of the vein whilst preserving the epidermis. This energy destroys the vein selectively and very safely. Unlike several alternative procedures such as laser and electrolysis, this means there is no break in the vascular systems and no risk of burns, bruising, necrosis or pigmentation.

This exclusive method is effective and relatively painless. Equipped with a magnifying loop, the practitioner introduces a fine needle over the vein and in most cases it disappears instantaneously. There is no bandaging required. V-Beauty™ treats red spot, rosacea and most facial red veins, including those intra-nasal veins which have previously been untreatable. V-Beauty™ can be used equally well on men. The sterile, single use, ultra fine needle is coated with an invisible insulating sheath which protects the skin, enabling a targeted treatment without risk of harm, pain or side effects.

face the future with V-Beauty™

face - the demand

55% of our adult population are affected by thread veins, that's 15 million people . . .

Thread veins are very small, rarely exceeding 0.3mm in diameter. This makes it virtually impossible for traditional treatment methods to be used to eliminate these unsightly blood vessels. Many salons simply won't take the risk with Lasers and IPL's and so often end up turning away potential business, but now there is a way forward . . .

face - the facts

- Well established technology
- NON LASER
- NON IPL
- Acclaimed by the National Press
- Instant results
- Simple and affordable procedure
- No side effects
- No bruising
- No bandaging
- 'Walk in Walk out' treatment
- Portable
- Low capital outlay
- Unprecedented financial return

face - the response

“ I would just like to say a big thanks to you and your colleagues for introducing me to the V-Beauty™ system. This is one of the best investments (if not the best) I have made to date. I have had dealings with a broad range of equipment suppliers since I have specialised in the aesthetics sector and can honestly say that your level of service and commitment is beyond compare. The V-Beauty™ has paid for itself at least four times over in the first month of operation. The phone literally never stops ringing. This easy and uncomplicated treatment 'does what it says on the tin' and my staff members are filled with confidence at the ease with which the treatment is applied and the results achieved. I am delighted with my purchase and just as importantly, the level of commitment I have received ”

Yours sincerely, J. R. - Milton Keynes
